Overview

Azure network security groups

Azure Firewall

Azure DDoS Protection

Azure Web Application Firewall

Azure Bastion

Azure Key Vault

Encryption on Azure

Azure Network Security Groups

Azure Network Security Groups (NSG)

**Filter network traffic to/from Azure resources
in an Azure Virtual Network**

NSG work with security rules

- Decide traffic to allow or block based on rules

Network Security Groups Configurations

Name

Priority

Source and
Destination

Protocol and Port
Range

Direction

Action

Network Security Groups Example

Microsoft Azure Search resources, services, and docs (G+) 3 ? User vladcatrinescu@

Tags (edit) : Add tags

Filter by name Port == all Protocol == all Source == all Destination == all Action == all

Priority ↑↓	Name ↑↓	Port ↑↓	Protocol ↑↓	Source ↑↓	Destination ↑↓	Action ↑↓
Inbound Security Rules						
300	⚠ RDP	3389	TCP	Any	Any	Allow
65000	AllowVnetInBound	Any	Any	VirtualNetwork	VirtualNetwork	Allow
65001	AllowAzureLoadBalance...	Any	Any	AzureLoadBalancer	Any	Allow
65500	DenyAllInBound	Any	Any	Any	Any	Deny
Outbound Security Rules						
65000	AllowVnetOutBound	Any	Any	VirtualNetwork	VirtualNetwork	Allow
65001	AllowInternetOutBound	Any	Any	Any	Internet	Allow
65500	DenyAllOutBound	Any	Any	Any	Any	Deny

NSG are created in a Virtual Network

Can be assigned to multiple subnets or network interfaces

The screenshot shows the Microsoft Azure portal interface for managing Network Security Groups (NSGs). The top navigation bar includes the Microsoft Azure logo, a search bar, and various navigation icons. The current page is 'Win7PS-nsg | Inbound security rules' under the 'Network security groups' section. On the left, a sidebar menu lists options like 'Inbound security rules' (which is selected and highlighted in grey), 'Outbound security rules', 'Network interfaces', 'Subnets', 'Properties', 'Locks', 'Monitoring', 'Alerts', 'Diagnostic settings', 'Logs', and 'NSG flow logs'. The main content area displays a table of inbound security rules. The table has columns for Name, Port, Protocol, Source, Destination, and Action. There are five rules listed:

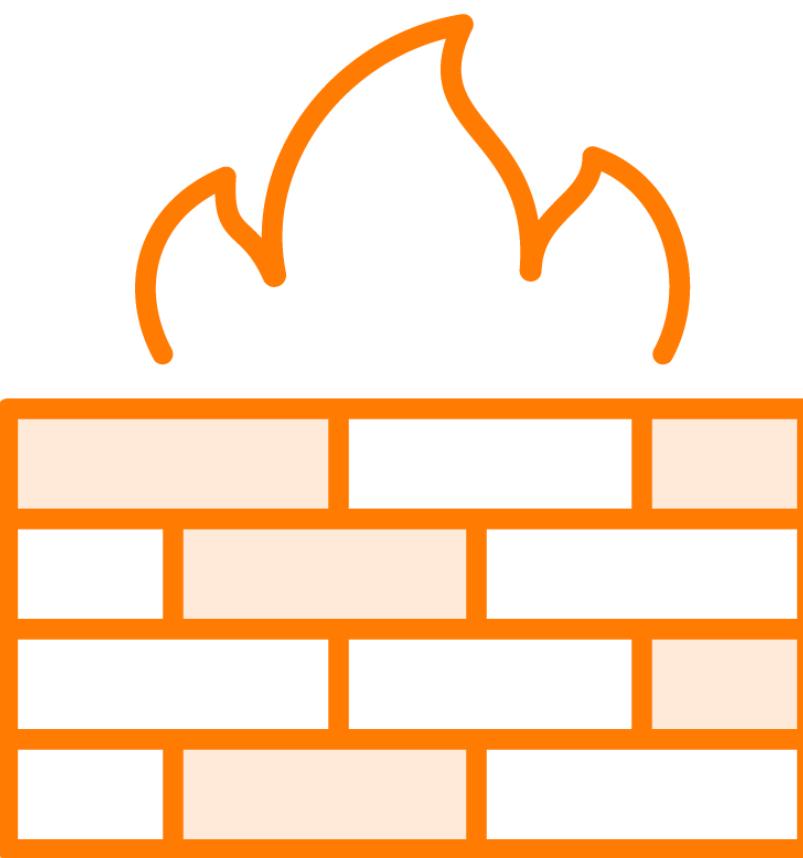

Name	Port	Protocol	Source	Destination	Action
default-allow-rdp	3389	TCP	Any	Any	Allow
AllowVnetInBound	Any	Any	VirtualNetwork	VirtualNetwork	Allow
AllowAzureLoadBalanc...	Any	Any	AzureLoadBalancer	Any	Allow
DenyAllInBound	Any	Any	Any	Any	Deny

Azure Firewall

Azure Firewall

Cloud-based network security service that protects your Azure Virtual Network resources

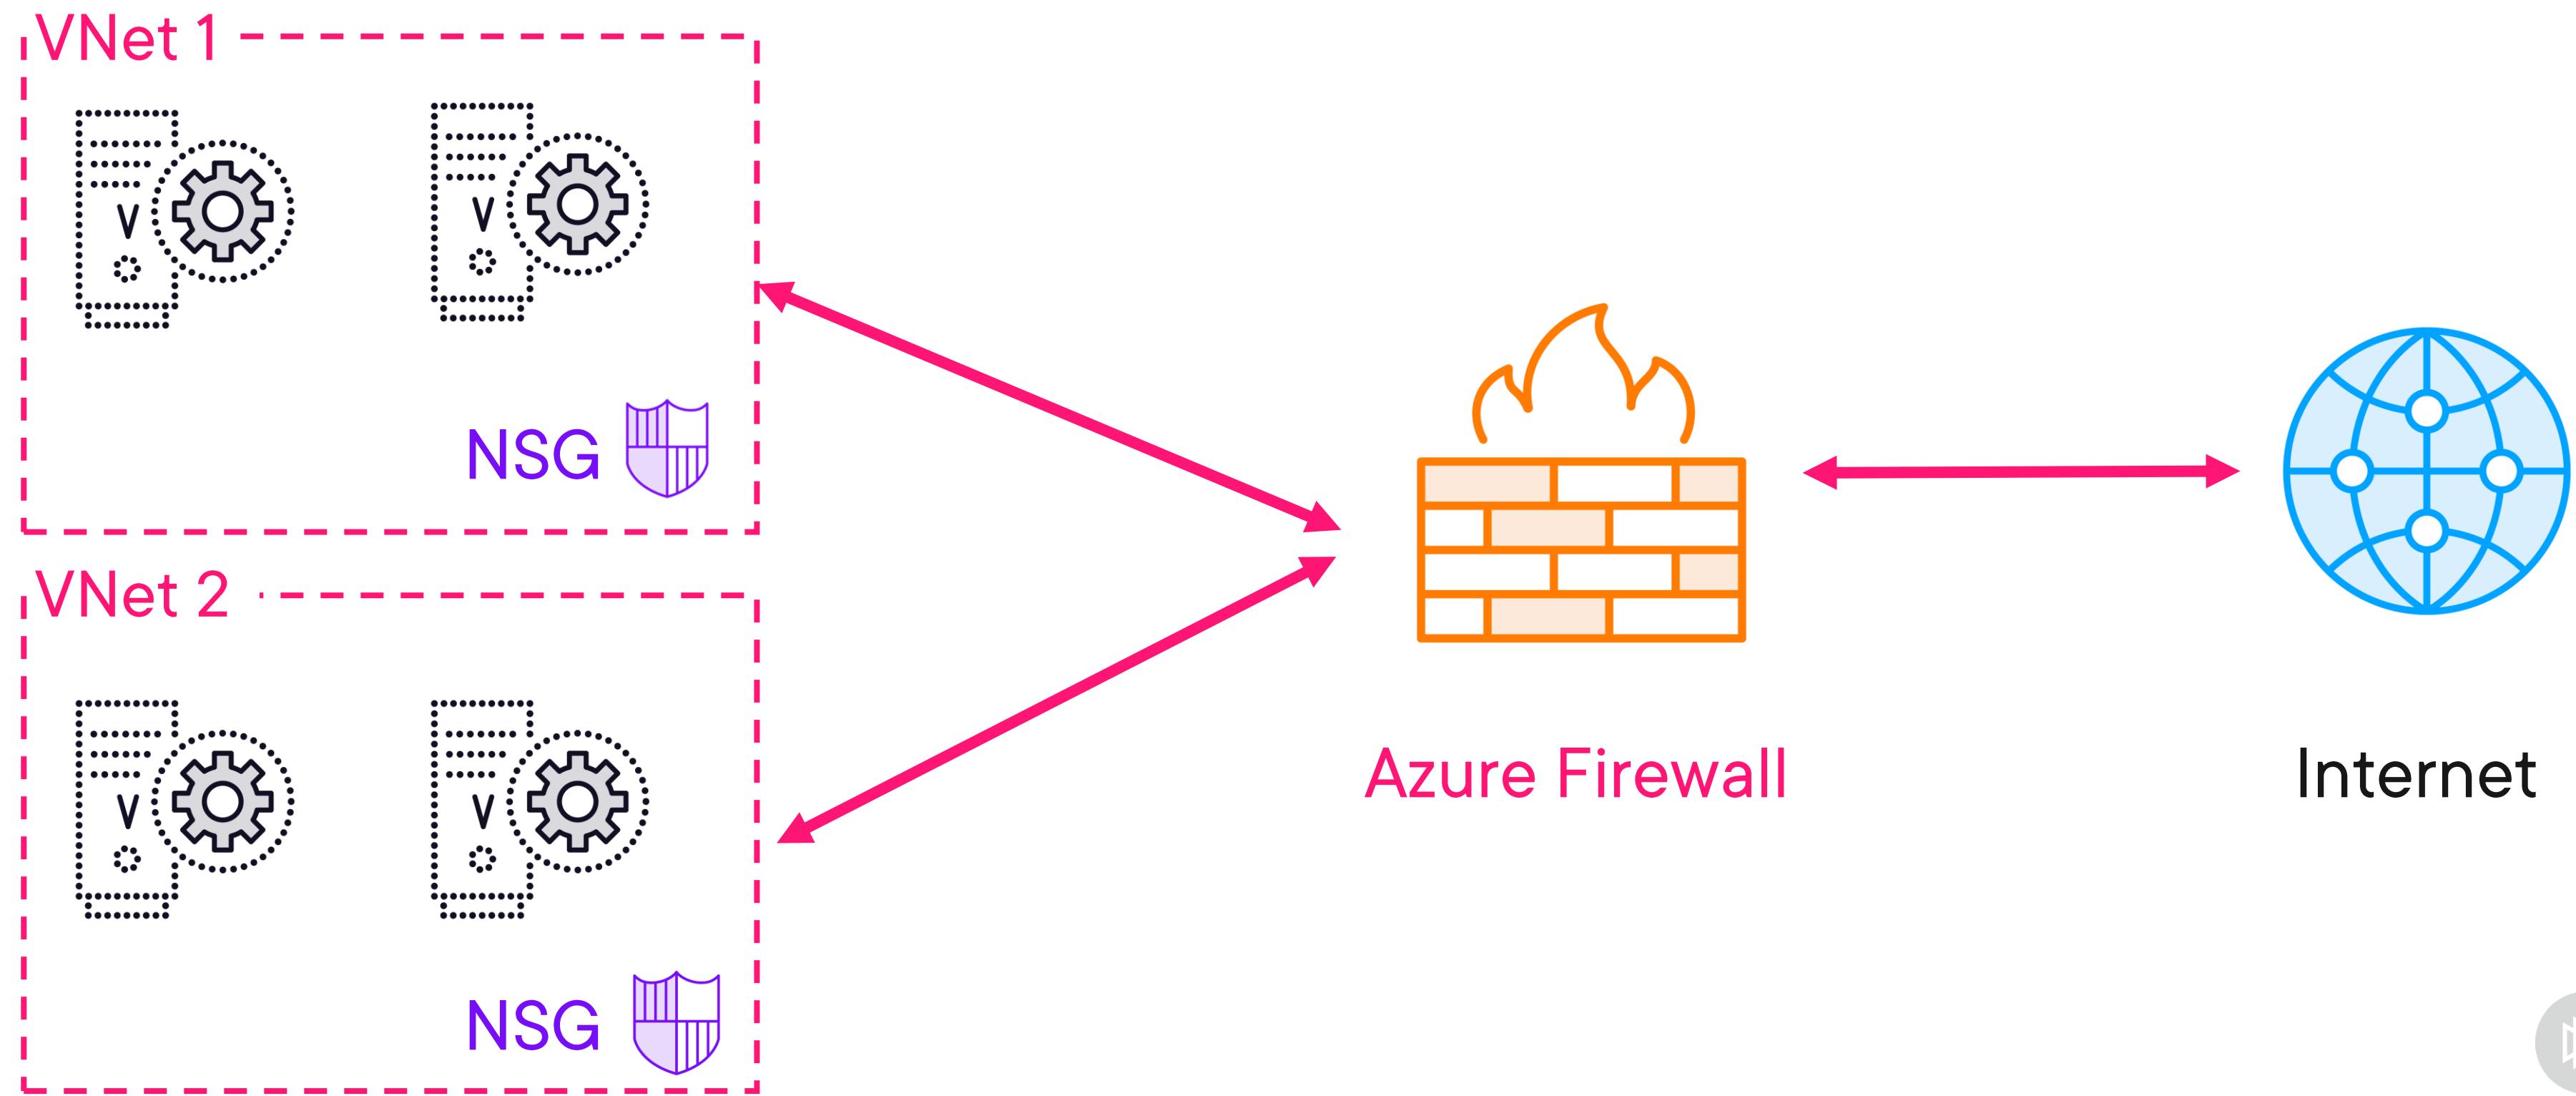

Firewall as a service with built-in high availability and unrestricted cloud scalability

Azure Firewall allows you to secure multiple subscriptions/virtual networks

- Able to create L3 – L7 policies

Azure Firewall vs. Azure NSG High-level Overview

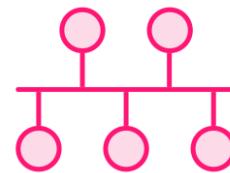

**Azure Firewall and Azure
NSG are complementary.
Together they provide
better “Defense-in-Depth”
network security.**

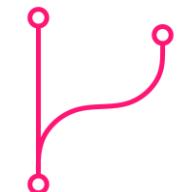

Azure Firewall Features

Built-in high availability

Network and application-level filtering

Outbound SNAT (source network address translation) and inbound DNAT (destination network address translation)

Multiple public IP addresses

Threat intelligence and integration with Azure Monitor

Azure Firewall SKUs

Azure Firewall Basic

Recommended for SMB customers with throughput needs of 250 Mbps.

Azure Firewall Standard

Recommended for customers looking for Layer 3–Layer 7 firewall and needs autoscaling to handle peak traffic periods of up to 30 Gbps.

Azure Firewall Premium

Recommended to secure highly sensitive applications. It supports advanced threat protection capabilities like malware and TLS inspection.

Feature Comparison

Feature Category	Feature	Firewall Basic	Firewall Standard	Firewall Premium
L3-L7 Filtering	Application level FQDN filtering (SNI based) for HTTPS/SQL	✓	✓	✓
	Network level FQDN filtering – all ports and protocols		✓	✓
	Stateful firewall (5 tuple rules)	✓	✓	✓
	Network Address Translation (SNAT+DNAT)	✓	✓	✓
Reliability & Performance	Availability zones	✓	✓	✓
	Built-in HA	✓	✓	✓
	Cloud scalability (auto-scale as traffic grows)	Up to 250Mbps	Up to 30 Gbps	Up to 100 Gbps
	Fat Flow support	N/A	1 Gbps	10 Gbps
Ease of Management	Central management via Firewall Manager	✓	✓	✓
	Policy Analytics (Rule Management over time)	✓	✓	✓
Enterprise Integration	Full logging including SIEM integration	✓	✓	✓
	Service Tags and FQDN Tags for easy policy management	✓	✓	✓
	Easy DevOps integration using REST/PS/CLI/Templates/ Terraform	✓	✓	✓
	Web content filtering (web categories)	✓	✓	✓
Advanced Threat Protection	DNS Proxy + Custom DNS	✓	✓	✓
	Threat intelligence-based filtering (known malicious IP address/ domains)	Alert	✓	✓
	Inbound TLS termination (TLS reverse proxy)			Using App GW
	Outbound TLS termination (TLS forward proxy)			✓
	Fully managed IDPS			✓
	URL filtering (full path - incl. SSL termination)			✓

Azure DDoS Protection

Distributed Denial of Service Attacks

Distributed denial of service (DDoS) attacks are some of the largest availability and security concerns facing customers that are moving their applications to the cloud. A DDoS attack attempts to exhaust an application's resources, making the application unavailable to legitimate users. DDoS attacks can be targeted at any endpoint that is publicly reachable through the internet.

Most Frequent Types of DDoS attacks

Volumetric
attacks

These are volume-based attacks that flood the network layer with seemingly legitimate traffic, overwhelming the available bandwidth

Protocol
attacks

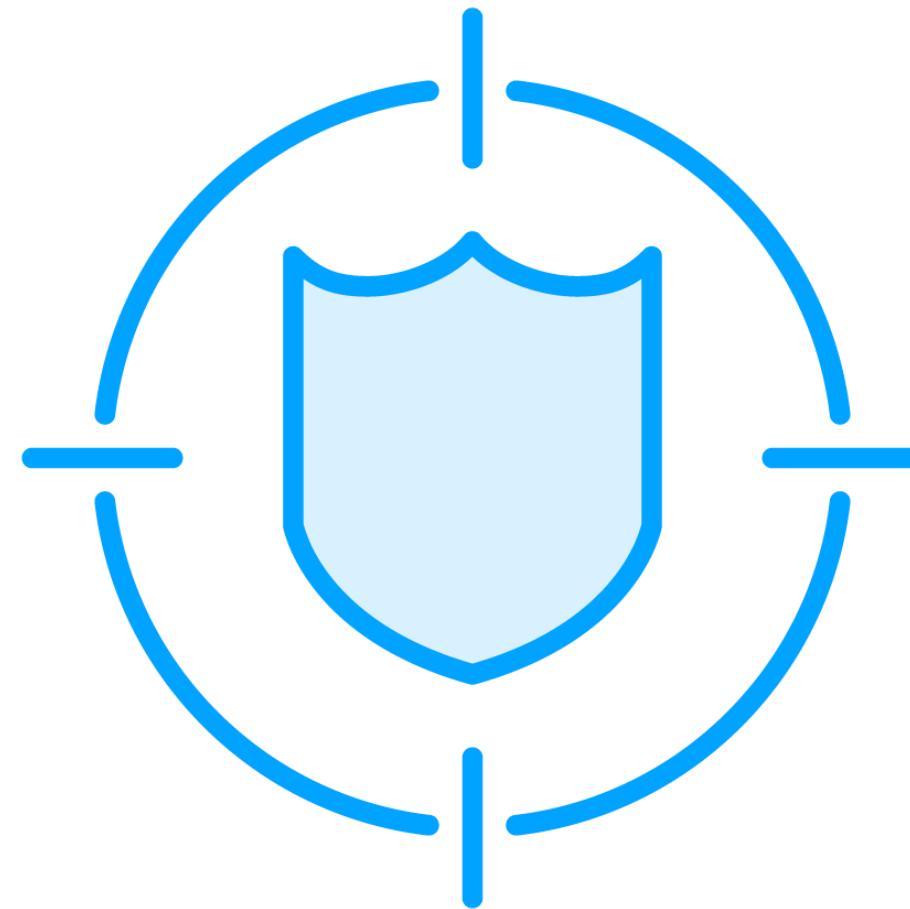

Protocol attacks render a target inaccessible by exhausting server resources with false protocol requests that exploit weaknesses in layer 3 (network) and layer 4 (transport) protocols

Resource
layer attacks

These attacks target web application packets, to disrupt the transmission of data between hosts

Azure DDoS Infrastructure Protection

Every property in Azure is protected with DDOS Infrastructure protection

- At no additional cost!

Analyzes network traffic and discards anything that looks like a DDOS attack

- No user configuration or application changes

Protects all Azure services

- Including PaaS services

Two Premium SKUs

DDoS IP Protection

Pay-per-protected IP model SKU providing premium DDoS mitigation features and tuning capabilities

199\$/IP/Month

DDoS Network Protection

Full network DDoS protection service with premium features such as DDoS rapid response support and cost protection

\$2,944/month for 100 IPs

DDoS Network Protection Premium Features

DDoS rapid response support

Cost protection

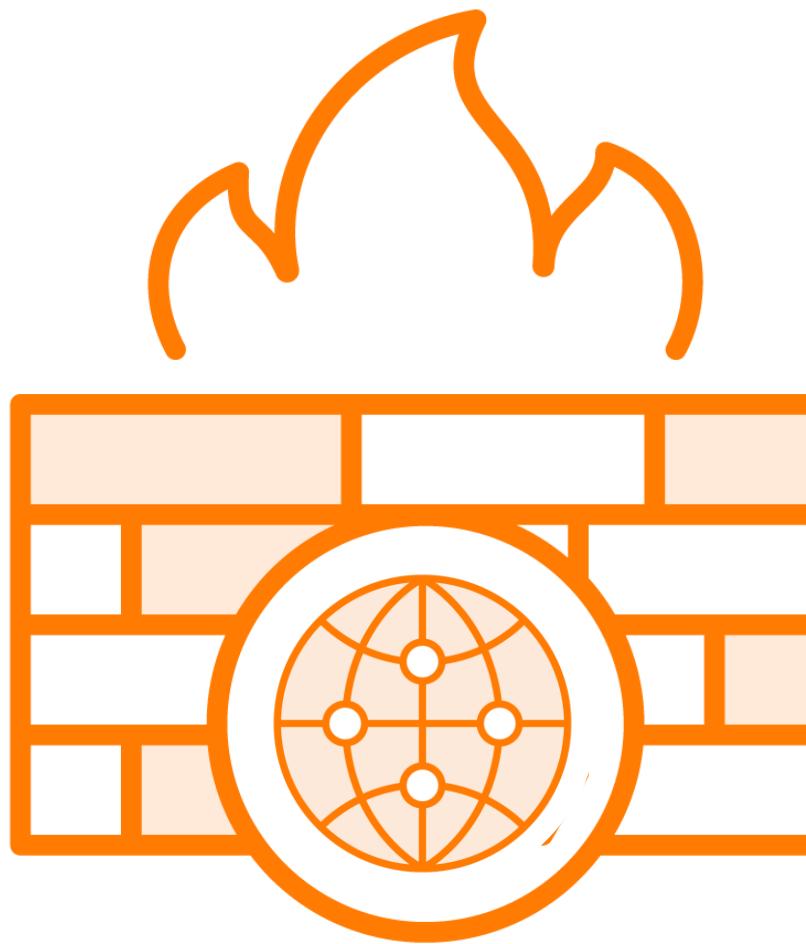

WAF discount

Azure Web Application Firewall

Azure Web Application Firewall (WAF)

Provides centralized protection of your web applications from common exploits and vulnerabilities

- SQL injection
- Cross-site scripting
- Remote file inclusion

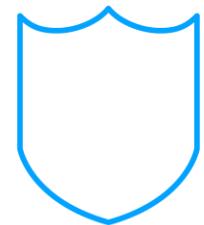

Single WAF can protect up to 40 web applications

- Centralized management

Pre-built and custom policies

Web Application Firewall Key Benefits

Protection against threats and intrusions

Simpler security management

Improves the response time to a security threat

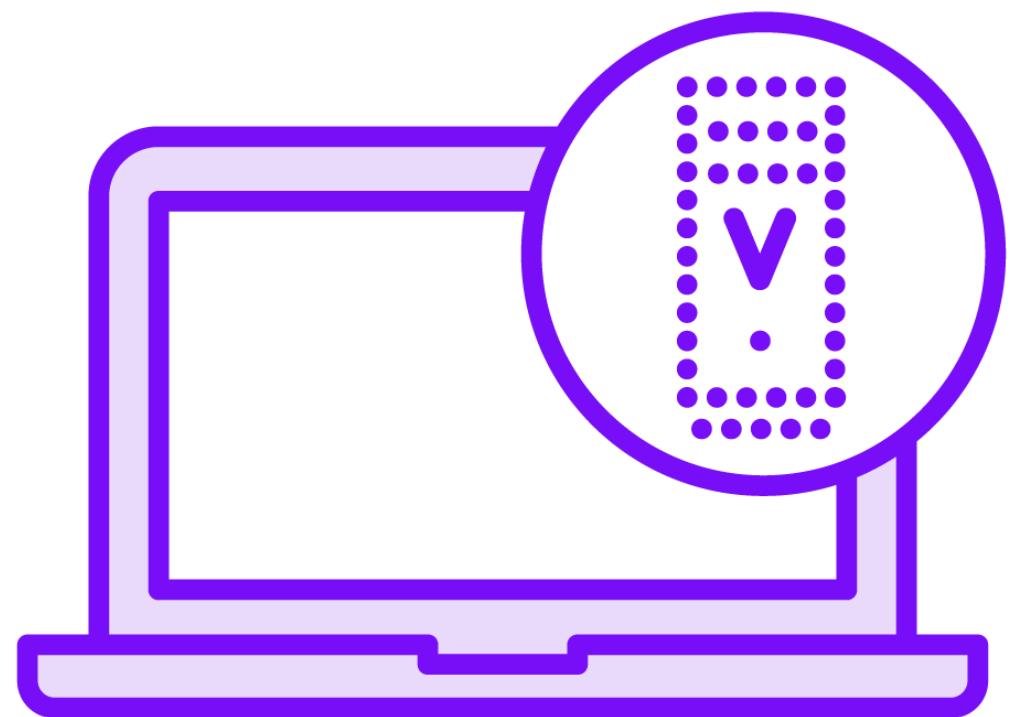

Built-in monitoring

Azure Bastion

Azure Bastion

Provides secure and seamless RDP/SSH connectivity to your virtual machines

- Directly from the Azure Portal
 - Over TLS

PaaS managed service

No public IP or special tool needed on your virtual machines

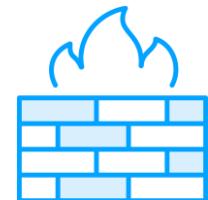

Deployed at the virtual network level

Key Azure Bastion Features

RDP and SSH directly in Azure portal

Remote Session over TLS and firewall traversal for RDP/SSH

No Public IP required on the Azure VM

Protection against port scanning

Protect against zero-day exploits

Demo

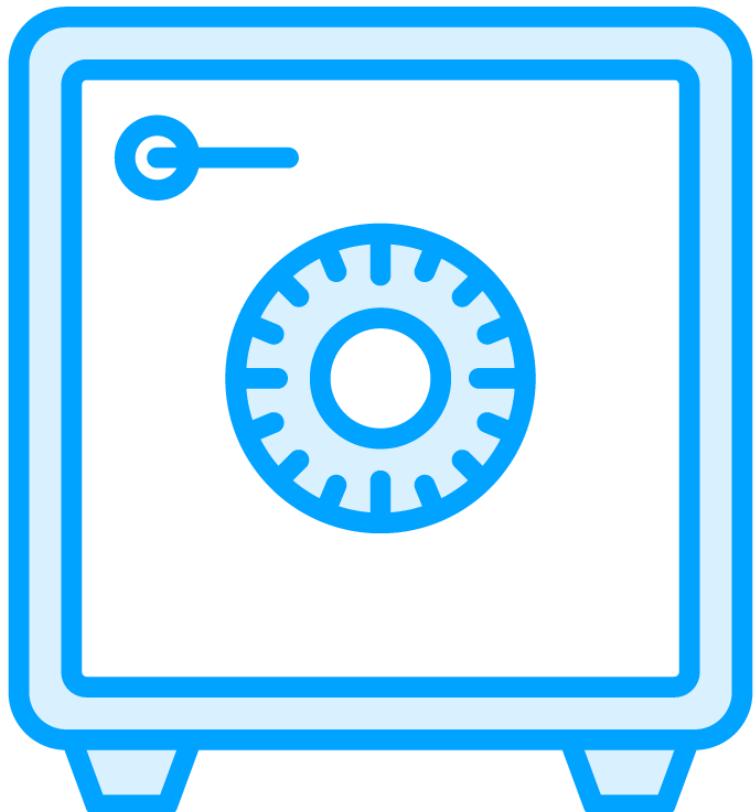

Azure Bastion

Azure Key Vault

Azure Key Vault

Cloud service for securely storing and accessing secrets

- Passwords
- API keys
- Certificates
- Cryptographic keys

Store secrets based by software or hardware security modules (HSMs)

All secrets are encrypted

Encryption on Azure

Encryption on Azure

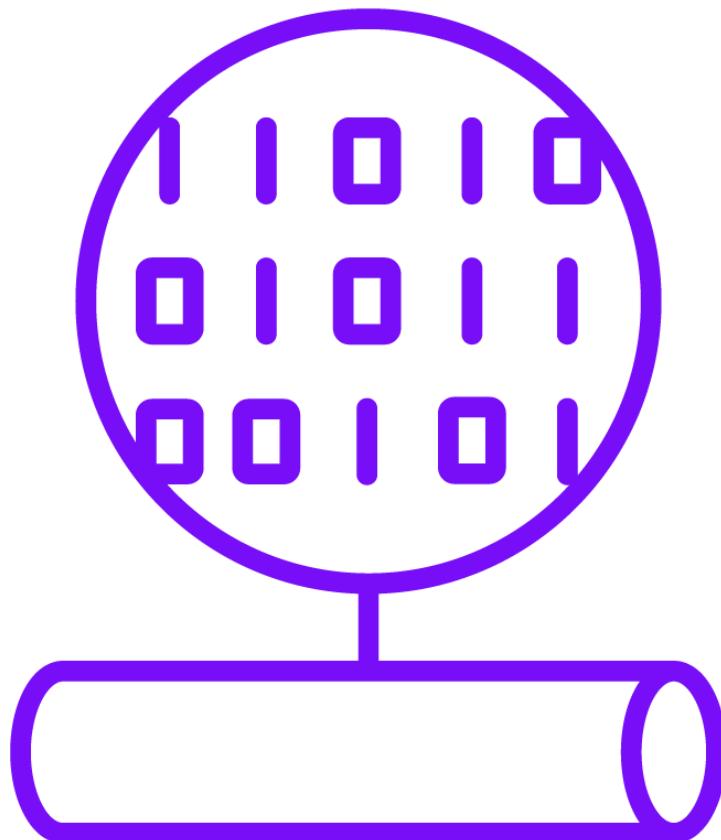

Azure Storage
Service Encryption

Azure disk
encryption

Transparent data
encryption

Azure Storage Service Encryption (SSE)

Azure SSE can automatically encrypt data before it's stored

- Azure Blob, Azure Files, Queue Storage
 - And automatically decrypted when you retrieve it

Process is completely transparent to users

Uses 256-bit Advanced Encryption Standard

- One of the strongest block ciphers available

Azure Disk Encryption

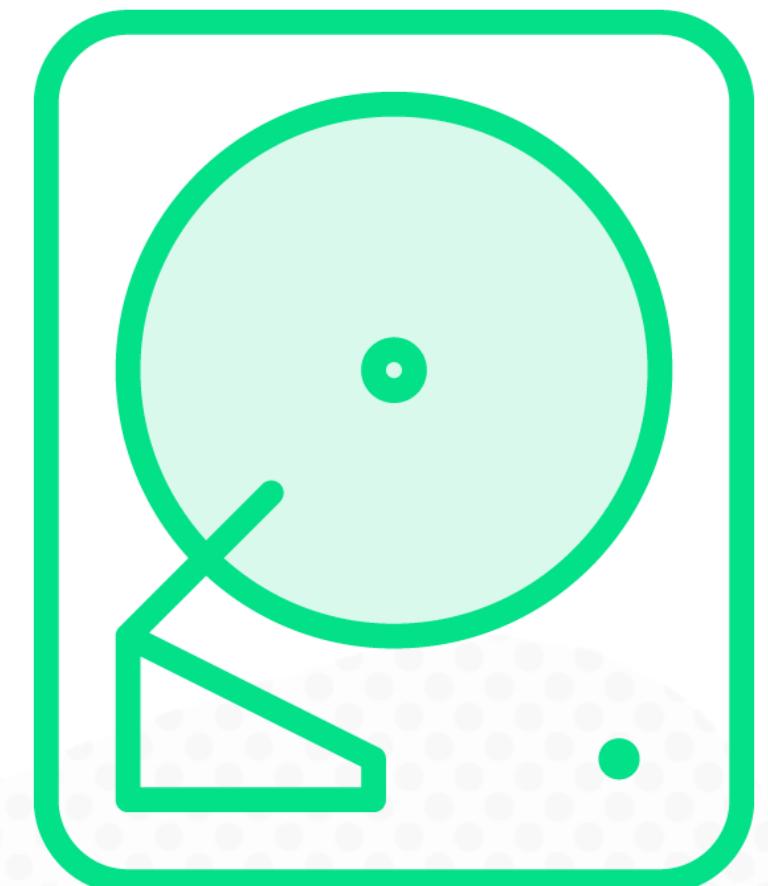

Protect Windows and Linux based virtual machines

Windows BitLocker

Linux DM-Crypt

Encrypt both OS disks and data disks

Encryption keys and secrets stored in Azure Key Vault

Transparent Data Encryption

Used to encrypt data in real time

- SQL Server
- Azure SQL Database
- Azure Synapse Analytics

Protects data and log files

- Using AES and Triple Data Encryption Standard encryption algorithms

Enabled by default on newly created Azure SQL Databases
